

Facade Brush

Properties

Facade brush with an ergonomic plastic handle ensures a good grip. Synthetic brush fibers are a good alternative to natural fibres. Suitable for treatment of unbroken surfaces.

Use

For painting of facades and woodwork. Rinse the brush in water before use and work thoroughly into the paint. Store the brush in airtight packaging when not in use and avoid storing the brush in water.

Cleaning and Maintenance

Clean brushes using Brush cleaner, Basic cleaner or liquid soap. For non-aqueous paints, White spirit can be used instead.

Usefull Information

Disposal: Remove as much paint as possible from brushes before they are disposed of as small, combustible waste items.

Good practise

Remove as much paint as possible from tools before cleaning. Do not pour liquid paint residue or cleaning fluid down drains. Clean the paint residue from the brushes right up under the ferrule. Paint residue under the ferrule and between fibres will coagulate and result in brittle bristles. Avoid straining the bristles during drying and store the brush dry.
